

Mesako is a manufacturing company with expertise and the necessary tools in the production of piping systems, parts of the systems and associated equipment.

We offer piping system design, prefabrication of parts, delivery and assembly.

We mainly manufacture ready-to-install pipeline components from acid-resistant stainless steel and black steel for pipeline systems of biofuels, biogas and other aggressive substances.

We deliver on time and assemble with precision to ensure high quality and ensure as little downtime as possible at the facility.

To achieve the highest quality, orbital welding equipment and professional welding equipment are used.

We can help at every stage from planning to design to commissioning of the system. We can also develop specific sections of the object - such as pipeline system specifications.

Our customers are pharmaceutical and food companies, energy companies, water and sewage management companies.

We are certified according to EN 3834-2, ISO9001 and ISO14001; Welding quality testing is performed in accordance with standard EN 5817, welding seams are tested in accordance with standard EN ISO 10675-1. We work according to EN13480-4. Welders are qualified according EN287-1

Customer is always in focus!
